email address or ORCID

Abstract—This document is a model and instructions for L<sup>A</sup>T<sub>E</sub>X. This and the IEEEtran.cls file define the components of your paper [title, text, heads, etc.]. \*CRITICAL: Do Not Use Symbols, Special Characters, Footnotes, or Math in Paper Title or Abstract.

Index Terms—component, formatting, style, styling, insert.

## I. Introduction

This is the introduction section. PLEASE EDIT.

### A. Sub Sections

This is the sub section of the introduction. PLEASE EDIT.

## II. Related Works

This is the related works section. PLEASE EDIT.

## III. System Overview

This is the system overview section. PLEASE EDIT.

## IV. Design and Development

This is the design and development section. PLEASE EDIT.

## V. Result and Discussion

This is the result and discussion section. PLEASE EDIT.

## VI. Conclusion

This is the conclusion section. PLEASE EDIT.

This is cite example. [1]

This is reference. sections IV and VI or I

- Use either SI (MKS) or CGS as primary units. (SI units are encouraged.) English units may be used as secondary units (in parentheses). An exception would be the use of English units as identifiers in trade, such as “3.5-inch disk drive”.

- Avoid combining SI and CGS units, such as current in amperes and magnetic field in oersteds. This often leads to confusion because equations do not balance dimensionally. If you must use mixed units, clearly state the units for each quantity that you use in an equation.
- Do not mix complete spellings and abbreviations of units: “Wb/m<sup>2</sup>” or “webers per square meter”, not “webers/m<sup>2</sup>”. Spell out units when they appear in text: “. . . a few henries”, not “. . . a few H”.
- Use a zero before decimal points: “0.25”, not “.25”. Use “cm<sup>3</sup>”, not “cc”).

$$a + b = \gamma \quad (1)$$
